

Windows 7

Fully Microsoft Compatible

DMS NetFlow is fully compatible with Microsoft operating systems including XP and Windows 7

DMS NetFlow is a powerful tool for managing users and groups of users on your network.

It empowers designated users (with minimal training) to handle day to day network administration tasks, leaving technicians free to develop the network resource.

In an education environment, DMS NetFlow gives teachers more control of their pupils' use of classroom computers. That means less classroom disruption and more time to teach.

Easy to use: DMS NetFlow is easy to use. It has the friendly look and feel of the familiar Microsoft Windows environment so minimal training is required.

Create pupil records and allocate them to different groups depending on their year or which subjects they are taking. You can edit records, move them between groups and delete them cleanly as required.

For a healthier network: Processes that would normally be slow and laborious are automated and simplified, saving time and increasing productivity.

Key Features

Bulk User Importer: get up and running straight away, reading data directly from common School Management Systems.

Control: Users and usage are controlled so you can limit what users see on their desktop and what they have access to.

Password Changer WITH PHOTO: Reset user passwords and access user home areas. This saves time in the classroom and means network technicians don't need to be called. The password changer has student photos for ID verification.

Synchronise Accounts: with School Management Systems.

Access to Remote Systems: DMS NetFlow allows fast access to remote systems across the internet for authorised users.

Unauthorised Data Detection: Scheduled user data scans find pre-defined unauthorised file types (eg MP3) for quarantine or removal at administrator's discretion.

Automatic Start or Shutdown: You can set immediate or scheduled shutdown of individual or groups of PCs.

Different Views: Switch instantly between teaching group, year group, or user management structure views.

Printer Management Integration: Manage printer connections by user, location or both, so users can roam without limit.

Print Quota Management: Optional feature sets quotas for you to manage and control printer usage by individual user.

Application Roll Out: Requires Microsoft MDT 2010 Use DMS NetFlow to install applications across the network, either individually or in groups, to single or multiple workstations, straight away or scheduled.

TS Remote Applications: Requires 2008 TS Gateway server. Deploy applications from a central server to network users in real time so lessons continue without delay.

FAST! - Home Access: Requires 2008 TS Gateway server. Users access their workspace from home, running applications on the server as fast as if they were "local".

Automatic Integrity Check: DMS NetFlow's Automatic Integrity Check detects and repairs anomalies in the data structure.

Support Upgrade Protection: DMS supplies patches and updates that become available during the life of your licence.

Integration: DMS NetFlow can integrate with Windows Disk Quota, MDT 2010, SharePoint 2008, Exchange 2007 and NAP.

Powerful Reporting: Pre-set reports for User Logon, Unused Accounts, Disk Space Usage. Create your own reports too.

Acceptable Usage Policy: When you log on to the network for the first time, DMS NetFlow will present users with your AU Policy, which they must agree to before they can continue.

Diagnostic Scan and Repair: Automated fixes maximise protection for your system.

Enhanced Security: Measures are taken to ensure workstations remain restricted to prevent accidental or malicious changes.

Automatic Overnight Shutdown: Save £££s and help the environment with this feature which automatically shuts down network computers at pre-defined times. Experts estimate it costs £1 a week to keep a PC on overnight!
